W Department of Global Health E-Learning Program

Monitoring & Evaluation in Global Health

6 July to 20 September 2020
Nami Kawakyu, MPH, PhD(c)
11-12 weeks, 6-9 hours per week

About the Course
Want to harness the power of data to improve your global health program? Are you interested in learning to systematically collect and analyze data and apply it to the real world?

Monitoring and Evaluation (M&E) is a critical element of any successful health program. M&E enables programs to track and demonstrate progress, as well as diagnose programs to enable better results. Participants who complete this course come away with improved understanding of the necessary tools to develop and implement M&E frameworks for their global health programs.

This course is aimed toward public health and healthcare professionals.

Format
Participants engage in video lectures, case studies, readings, discussion forums, quizzes, and practical assignments.

You can participate in this course as an independent participant or as part of a site with five or more people. We encourage participation as a group because it provides a forum for discussing course concepts and applying them to the local setting and customs. If you can't join a group, the discussion boards can provide that forum.

The course is taught in English.

More Information
https://edgh.washington.edu/courses/monitoring-evaluation-global-health

Eligibility
The graduate-level course is aimed toward public health and healthcare professionals. To be admitted to the course you must have a Bachelor's-level degree or equivalent experience in a health-related field.

Fees*
Local sites (LMIC): $1500
(5-40 participants)

Independent participants (LMIC):
$299 (mailed certificate) or
$199 (digital certificate)

*Additional pricing information on eDGH website course page.

Note: Enrollment is limited for this pilot (first) offering of the course.

Based in the University of Washington's Department of Global Health, the Global Health E-Learning Program is a world-class provider of distance-based medical and public health education and training.
