

Introduction to Epidemiology for Global Health

January 13 – April 6, 2020

Brandon Guthrie, MPH, PhD

10 weeks, 6-9 hours per week

Are you interested in understanding distribution of disease and what factors affect risk of disease? **Introduction to Epidemiology for Global Health** gives an in-depth orientation to the field of epidemiology research in a global health context. You'll get an understanding of how epidemiologic methods are used to understand the distribution of disease within populations and what factors affect the risk of disease. Learn about important epidemiologic concepts, including how to describe disease risk, common study designs, bias and confounding, and the importance of appropriate measurement in epidemiologic research.

Format

This online graduate-level course has video lectures, readings, discussion forums, quizzes, and assignments.

You can participate in this course as an independent participant or as part of a site with between five and 25 people. We encourage participation as a group because it provides a forum for discussing course concepts and applying them to the local setting and customs. If you can't join a group, the discussion boards can provide that forum.

The course is taught in English.
